DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 6 and 37 are objected to because of the following informalities: lines 1-2, "said obstructions includes" should be --said obstructions include--. Appropriate correction is required.

Claims 20 and 49 are objected to because of the following informalities: line 2, "said obstructions includes" should be --said obstructions include--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 49 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 49 recites the limitation "said obstructions" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Allowable Subject Matter

Claims 1-48 and 50-52 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Prior art reference does not teach or renders obvious a method of improving a physical design of a current integrated circuit comprising the steps of receiving physical design information from a prior integrated circuit; and generating said physical design based on a netlist of the current integrated circuit and said physical design information.

Prior art reference does not teach or renders obvious a computer-readable medium comprising computer-executable instructions stored therein for performing a method of improving a physical design of a current integrated circuit, said method comprising receiving physical design information from a prior integrated circuit; and generating said physical design based on a netlist of the current integrated circuit and said physical design information.

Prior art reference does not teach or renders obvious a method of determining a plurality of pins for each block of a physical design of a current integrated circuit comprising receiving physical design information from a prior integrated circuit, wherein said physical design information includes pin assignments of blocks of said prior integrated circuit; using a netlist of said current integrated circuit and said physical design information to perform a top level placement for a plurality of ports corresponding to each block of said current integrated circuit; using said netlist and said physical design information to perform a top level route for said ports to determine pin assignments for each block of said current integrated circuit; and generating each pin for each block based on said top level route to determine pin assignments.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference A is being cited since it shows a physical design of an integrated circuit
